Day 3

Notes

3.1 Independent and Dependent Relationships and Domain and Range

Independent Variable

The event or variable that stands by itself, it is **the cause**

The Input or **x variable** and is plotted on the **x-axis**

Dependent Variable

The event or variable that **depends on the independent variable** and **changes depending on it**

The Output or **y variable** and is plotted on the **y-axis**

Independent Variable Ex.

Dependent Variables Ex.

time worked,
age,
number of objects
bought

Depends on

money earned,
height,
total cost

Determining
Independent
and
Dependent
Variables

Ask yourself: which variable depends on the other?

This will be the dependent variable

Car insurance costs increase with traffic violations and accidents

Independent X: Traffic violations
+ accidents

Dependent Y: Car insurance cost

Ice cream sales increase as the temperature increases

Independent X: Temperature

Dependent Y: Ice cream sales

Aiden charges \$25 per hour to fix your computer

Independent X: # hours worked

Dependent Y: Cost to fix computer

States with larger population have more seats in the House of Representatives

Independent X: Population size

Dependent Y: # of seats in the
House of Representatives

Let's Explore Domain and Range more!

Domain and Range for connected points

When points are connected by a curved line, then there would be too many values to write all the values of the ordered pairs as a set (we would have to include every decimal between each two integer numbers)...

So instead we use inequalities

Domain: leftmost x value $< x <$ rightmost x value

ex. $-4 < x < 9$

Range: lowest y value $< y <$ highest y value

ex. $-2 < y < 5$

-use $<$ if the value is not included

-use \leq if the value is included

State the Domain and Range

for each

1. Disconnected Points List them
 Domain: $\{-2, -1, 0, 1, 2\}$
 Range: $\{-2, 0, 1, 2\}$

2. Connected Points Inequalities
 Domain: $-\infty < x < \infty$
 Range: $-\infty < y \leq 2$

3. Mapping from x to y
 Domain: $\{-1, 0, 1, 2\}$
 Range: $\{4, 5, 6, 7\}$

4. Yes there are jumps but points are connected
 Domain: $-2 \leq x \leq 2$
 Range: $\{-2, -1, 0, 1, 2\}$

5. Domain: $\{2\}$
 Range: $-\infty < y < \infty$

6. Domain: $-\infty < x < \infty$
 Range: $-\infty < y < \infty$

10. $-2x + 4y = 0$ (Graph of a line)

11. $x^2 + y^2 = 9$ (Graph of a circle)

12. $x = -4$ (Graph of a vertical line)

13. $y = 2$ (Graph of a horizontal line)
